

Use this scenario with students as you present the Creative Problem Solving Process:

TO PROM or NOT TO PROM

A problem has come up in a school of 5000 students, grades 9-12. It has come to your attention that a large number of the students in all four grade levels would like to have an all-school prom prior to spring break. Because of problems in the past, some ten years ago, this occasion was cancelled and never reinstated.

Should the prom be reinstated if the majority of students want it? If it is reinstated, can you create a plan for reinstatement? If it is not, create a presentation to all students as to why the prom should remain on hold.
